15. What are the four questions asked in the method described by van Westendorp (1976)? What are the key statements of those?
16. Name the 8 listed methods to evaluate the market size according to the lecture .
17. What are the intended outcomes of a competitor analysis (ca) according to the lecture?
18. What are the six steps of the competitor analysis? Describe them briefly.

Question Catalog Session 4

1. What is a patent (definition used in the lecture)?
2. Name the three highlighted characteristics of a patent and the respective descriptions.
3. What are the findings of patents according to Häussner et al. (2012)?
4. What are the three phases in the patent life-cycle?
5. Name the different phases of the patent life-cycle and assign it to the respective category. Also name all subitems with at least one description per category.
6. What is excluded from patenting in Germany? Name four examples.
7. Name three opportunities and three risks related to patenting.
8. What is the PCT? What does it provide? Define as written in the lecture.
9. What is a NTBF? Define according to the lecture.

Question Catalog Session 4

10. Name the Success Factors of New Ventures according to Song et al. (2008).
11. What is technology push according to the lecture?
12. What is market pull according to the lecture?
13. Name the four levels of the TAS framework according to Terzidis & Vogel (2017).
14. What are the 9 Technology Readiness Levels (TRLs) according to the model of NASA?
15. What is a technology according to the lecture? Name all four subitems.
16. Fill a Technology Canvas on the next page with the historic example of cloud computing given in the lecture.

Title Cloud Computing		Name	
Example Application	Core Idea, Function		Promise & Novelty
Current Practice	Drawing		Limitations

Question Catalog Session 5

1. How defines Terzidis (2019) Leadership and the leader, according to the lecture?
2. According to Luhmann (1995), what are the three characteristics of a Modern Organization?
3. What are the six traits, that are related to leadership according to Northouse (2016)?
4. What are the five factor personality model dimensions that are related to leadership according to Northouse (2016)?
5. What is the Basic Assumption of Transformal Leadership according to Northouse (2016)?
6. Name the six principles of effective leadership according to Malik (2006) and explain each one in your own words.
7. What are the five tasks of effective leadership according to Malik (2006)?
8. Define the term 'decision' using the definitions of Mintzberg (1976) and the Gabler business dictionary (Wirtschaftslexikon).

10. What are the seven tools of effective leadership according to Malik (2011)?

Question Catalog Session 6

1. Name the three forms of external financing mentioned in the lecture. For each of those, name the three outlined definitions according to Hahn (2014).
2. Name all categories of internal financing for funding a start-up.
3. What is the definition of risk according to the Gabler Online Wirtschaftslexikon (2020)?
4. What is the legal definition of Bankruptcy? Name the main liability of the management, according to the Insolvency code.
5. What are the three reasons for insolvency (InsO §17-19)?
6. The risk of the investors depends on the type of investment:
Categorize the different types of external financing (Diagram 1).
Name two key points each.

Diagram 1

Question Catalog Session 6

7. Fill out the Start-up Financing Cycle in detail including the Start-up Life Cycle (Diagram 2).

Diagram 2

8. Early-Stages: Why is it difficult for start-ups to obtain loans according to Hof (2017)? Name all the mentioned aspects.
9. What are the characteristics of the Idea phase according to the lecture?
10. What are the characteristics of the start-up phase according to the lecture?
11. What are the top five motivations of Business Angels for Investing according to Brandenburger et al. (2012)?

Question Catalog Session 6

12. Name the five top factors in the category Entrepreneur & team according to Brandenburger et al. (2012).
13. Name the six main phases of the funding process.
14. How do investors identify new companies according the lecture?
15. Name and explain the several events an investor can make an exit through according to Cumming & MacIntosh (2003).
16. How is a failure defined according to Gage (2012)?
17. Name the 5 top reasons why Startups fail.

Question Catalog Session 7

1. Explain the three mentioned reasons why it is necessary to have a business plan according to the lecture.
2. What are the four key objectives and the three key instruments of EXIST according to the lecture?
3. Name a typical structure of a business plan.
4. What are the four sections of the EXIST business plan template? (Gründerstipendium)
5. What are the three definitions mentioned in the lecture for pricing (Simon, 2004; Piercy et al., 2010; Ingenbleek et al., 2003)?
6. Explain GbR, GmbH and UG according to the slides in the lecture.
7. What is the definition of Risk according to Vaughan (2008).
8. Explain the Van Westendorp-Method using your own words and point out the four main questions.

Question Catalog Session 7

9. Name the five points of the Consequence Scale including the explanations.
10. Name the five points of the Likelihood Scale including the explanations.
11. Name the three options to treat risks including the explanation, mentioned in the lecture.
12. Name the steps of the Linear causation approach.
13. Name the steps of the Linear causation approach in an entrepreneurial context.
14. Name and explain the five principle of effectuation according to Sarasvathy (2009)?

CASE STUDY

Case Study - Volocopter

- Volocopter is one of the leading companies in the market of urban air mobility, claiming to “bring urban air mobility to your life” (Volocopter, 2021). It acts as a service provider that develops battery-powered autonomous electric air vehicles with a focus in the design of electric multicopter helicopters in the form of personal air vehicles, designed for air taxi use. With VOLOCITY they provide a fast, flexible and reliable solution for private customers seeking urban transportation for personal and work-related purpose. They seek to establish an entire service ecosystem, accordingly they offer further air mobility options, e.g. VOLODRONE, which focusses on transporting goods.
- Without even selling, Volocopter already reached a high popularity due to cooperation and funding of big companies like DB Schenker, Daimler and INTEL, but also with research institutions like the Fraunhofer Institute of industrial engineering. Through this partnerships Volocopter addresses typical challenges like “mitigating time pressure, distributing investments and ensuring expertise” (Volocopter, 2021). Furthermore, Volocopter won numerous awards. Especially by being awarded as technology pioneer by the World Economic Forum in 2019 Volocopter got a huge prominence not only in the technologic sector but cross-sectoral, which also increased further attention from potential future customers and investors.

Case Study - Volocopter

- To ensure their path to the air-mobility service ecosystem Volocopter maintains close connection to institutions like Deutsche Flugsicherung Volocopter so they can be safely integrated in today's flight activities. Volocopters owns numerous patents, with the latest being filed in March 2021, and their high-qualified staff show their continuing efforts in designing and developing to keep the brands, company knowledge and patents at a high level. On their path towards a new dimension of (air) mobility they also need to ensure an excellent IT-Infrastructure. Consequently, they need well educated and competent staffing, as engineers, well-trained pilots (while having in mind autonomous flying), architects and planners.
- Volocopter reached high prominence with comparatively scant marketing. Furthermore, it offers besides their website for corporate communication different channels of social media like Instagram, Youtube and Twitter, to keep in touch for operative communication. Volocopters reaches customer also through social media channels of the cooperation partners. For the usage of the VOLOCITY they are also working on further communication channels, as the VOLOIQ, to improve the customer relationship by offering sophisticated customer support service.

Case Study - Volocopter

- Although no flights are currently sold, Volocopter is planning to set a certain fare price for VOLOCITY and VOLODRONE, either based on travelled distance, minutes travelled or per flight. However, during their testing phase in 2020 they charged 355\$ per 15 minutes of flying. This price may occur amongst other things by the huge investment for developing the next level of air mobility, as Volocopter needs to put a lot of effort in designing and engineering but also in the operation urban air taxi services.
- Overall, Volocopter claims to be “mobility’s new dimension” and invites to “enjoy the sky with us” (Volocopter, 2021).
- 1. Name the nine building blocks and fill out the Business Model Canvas on the next page for Volocopter – with at least two aspects in each block.

Case VOLOCOPTER

KEY PARTNERS 	KEY ACTIVITIES  KEY RESOURCES 	VALUE PROPOSITION 	CUSTOMER RELATIONSHIPS  CHANNELS 	CUSTOMER SEGMENTS 
COST STRUCTURE 		REVENUE STREAMS
